

When You Succeed, We Succeed

@task believes in and follows seven principles that lead to project success. We know when you're successful, we're successful.

1

Real-Time Planning

@task's unique and effective project and portfolio management solutions give your organization the power to plan your projects in real time, allowing for any contingency. Whether your job is to fully allocate an entire division for the next six months or figure out how an emergency project is going to affect current work load, @task will keep you covered.

2

Rapid Communication

Improvement starts with good communication. @task provides a full set of workflow notifications and tools to help people talk about tasks and issues, resolve problems, and focus on their work. @task customers regularly enjoy 20%-40% productivity improvements, with some seeing improvement as high as 500%.

3

User Acceptance

If someone can't figure out how to use a software solution, they won't use it. The @task PPM solution is more intuitive and user-friendly than the other project and portfolio management solutions. In fact, you don't need formal training in project management to get great results with @task. With a broad a feature set and easy to navigate UI, @task is easy for every project team member to figure out – which means they will use it.

4

Complete Transparency

Being blindsided by a problem that has previously gone undetected is an executive's worst nightmare. Fortunately, @task addresses project management lifecycle problems immediately. When something needs attention, @task will make sure the right people know about it through workflow notifications, issue routing, and powerful reporting.

5

Full Compliance and Governance

Business has changed, and external pressure has increased. You can't just get things done—you have to be able to prove that you are doing them in compliance with all laws and regulations. @task's auditing, process enforcement, and powerful reporting capabilities allow you to eliminate concerns that you may not be in full compliance.

6

IT Freedom

When it comes to operating systems, browsers, and servers, everyone has a different preference, and when collaborating with internationally-based team members, IT environments differ. That's why @task is completely platform independent. You can use it in any IT environment, anytime, anywhere—even on your favorite mobile device.

7

Absolute Security

No one is more concerned about the safety of your data than @task. That's why @task gives you choices for storing your data: you can store it on your own server or store it on @task's secure server. Either way, you know your data is in a safe place. In addition, @task is SAS 70 certified, which is independent verification that we deliver fully secure, reliable, effective operating environments with the proper controls for conducting high availability IT operations.
